The Benefits of Choosing LS Networks

- ✔ Saves money by combining voice and data
- ✔ Voice Service traffic is separate from other services, allowing for full bandwidth utilization
- ✔ Increases personalization for a variety of access speeds from 1 Mbps to over 100 Gbps ethernet
- ✔ Consistent performance with Class-of-Service (CoS)
- ✔ Unlimited local and long distance calling at no additional charge
- ✔ Traditional voice handoffs, including PRI and basic analog business lines
- ✔ First-call resolution customer service

LS Networks Customization

- **Expand Your Presence:** As your business expands into new geographies, your communications network can automatically grow with you. SIP trunking makes it simple to move into new markets without having to further invest in depreciating capital equipment.
- **Branch Office IP PBX Extensions:** Support all office locations with a single, centralized IP PBX at the location of your choice, with the option to build a private virtual network.
- **Business Continuity:** Maintain uninterrupted communications service across multiple sites and keep operations functioning by automatically rerouting to a secondary location. Alternately, you can use SIP pooling to share sessions from other locations in the event of an equipment failure.
- **Private Network Reliability:** Enjoy better performance, more predictable call paths and fewer dropped calls because your voice calls “auto-prefer” our network.
